VERSION HISTORY

[Provide information on how the development and distribution of the Test Report was controlled and tracked. Use the table below to provide the version number, the author implementing the version, the date of the version, the name of the person approving the version, the date that particular version was approved, and a brief description of the reason for creating the revised version.]

Version #	Implemented By	Revision Date	Approved By	Approval Date	Reason
1.0	*<Author name>*	*<mm\/dd/yy>*	*<Project Manager name>*	*<mm/dd/yy>*	*<reason>*

Note to the Author

*[This document is a template of a **Test Report** document for a project. The template includes instructions to the author, boilerplate text, and fields that should be replaced with the values specific to the project.*

- *Blue italicized text enclosed in square brackets ([text]) provides instructions to the document author, or describes the intent, assumptions and context for content included in this document.*
- *Blue italicized text enclosed in angle brackets (<text>) indicates a field that should be replaced with information specific to a particular project.*
- *Text and tables in black are provided as boilerplate examples of wording and formats that may be used or modified as appropriate to a specific project. These are offered only as suggestions to assist in developing project documents; they are not mandatory formats.*

When using this template for your project document, it is recommended that you follow these steps:

1. *Replace all text enclosed in angle brackets (e.g., <Project Name>) with the correct field values. These angle brackets appear in both the body of the document and in headers and footers. To customize fields in Microsoft Word (which display a gray background when selected):*
    a. *Select File>Properties>Summary and fill in the Title field with the Document Name and the Subject field with the Project Name.*
    b. *Select File>Properties>Custom and fill in the Last Modified, Status, and Version fields with the appropriate information for this document.*
    c. *After you click OK to close the dialog box, update the fields throughout the document with these values by selecting Edit>Select All (or Ctrl-A) and pressing F9. Or you can update an individual field by clicking on it and pressing F9. This must be done separately for Headers and Footers.*
2. *Modify boilerplate text as appropriate to the specific project.*
3. *To add any new sections to the document, ensure that the appropriate header and body text styles are maintained. Styles used for the Section Headings are Heading 1, Heading 2 and Heading 3. Style used for boilerplate text is Body Text.*
4. *To update the Table of Contents, right-click and select "Update field" and choose the option- "Update entire table"*
5. *Before submission of the first draft of this document, delete this "Notes to the Author" page and all instructions to the author, which appear throughout the document as blue italicized text enclosed in square brackets.]*

1.0 INTRODUCTION

1.1 PURPOSE

The Test Report provides a detailed summary of the testing activities conducted for the SmartWaste Route: Waste Collection Scheduling & Route Optimization System. It documents the test cases performed, expected and actual results, identified defects, and the corrective actions taken during the testing process. This report is intended to evaluate the system's functionality, reliability, performance, and usability to ensure that all major features operate according to the specified requirements. The results of this report will determine whether the system is ready for deployment and practical use in improving waste collection operations in Tuy, Batangas.

2.0 TEST SUMMARY

Project Name: Echo Haulers
System Name: **SmartWaste:** Waste Collection Scheduling & Route Optimization System in Tuy, Batangas

Version Number: Version 1.0
Additional Comments:
Testing was conducted to evaluate the core functionalities of the Echo Haulers system, including waste collection scheduling, route optimization, real-time tracking, resident reporting, and administrative dashboard features. The system performed as expected in most test scenarios, with key functions operating correctly and meeting the specified requirements. Minor issues related to interface responsiveness and data synchronization were identified during testing and were resolved through system adjustments. Overall, the test results indicate that the system is stable, functional, and ready for deployment and user acceptance testing.

2.1 TEST TYPE (FUNCTION, UNIT, SYSTEM, ETC.)

[Include basic information about what was tested and what happened.]

Test Owner: *[John Doe]*
Test Date: *[mm/dd/yyyy] - [mm/dd/yyyy]*
Test Results: *[Enter a summary of the test conducted and results]*
Additional Comments: *[Enter any summary comments]*

2.2 TEST TYPE (FUNCTION, UNIT, SYSTEM, ETC.)

[Include basic information about what was tested and what happened.]

Test Owner: *[John Doe]*
Test Date: *[mm/dd/yyyy] - [mm/dd/yyyy]*
Test Results: *[Enter a summary of the test conducted and results]*
Additional Comments: *[Enter any summary comments]*

2.3 TEST TYPE (FUNCTION, UNIT, SYSTEM, ETC.)

[Include basic information about what was tested and what happened.]

Test Owner: *[John Doe]*
Test Date: *[mm/dd/yyyy] - [mm/dd/yyyy]*

Test Results: *[Enter a summary of the test conducted and results]*
Additional Comments: *[Enter any summary comments]*

3.0 TEST ASSESSMENT

The testing for the SmartWaste:Waste Collection Scheduling & Route Optimization System in Tuy, Batangas adequately covered its main features, including scheduling, route optimization, tracking, reporting, and dashboard functions. Results showed that the system performs reliably and meets its core requirements. However, additional testing is recommended for heavy user traffic, weak network areas, and real-world field use to further improve system performance. Overall, the test was sufficient and indicates that the system is ready for deployment with minor refinements.

4.0 TEST RESULTS

SmartWaste:Waste Collection Scheduling & Route Optimization System in Tuy, Batangas showed that most planned features functioned according to the original test plan and met the expected results. Core modules such as route scheduling, route optimization, complaint reporting, and dashboard monitoring operated successfully with accurate data processing and smooth system integration. Minor deviations were observed, including slight delays in real-time notifications, occasional synchronization issues between web and mobile platforms, and minor interface responsiveness concerns. These issues were identified during testing, documented, and resolved through system adjustments and optimization. Overall, no major defects were found, and the system performed reliably within its intended functions.

4.1 UNIT/MODULE/SYSTEM TESTING

Unit, module, and system integration testing activities were performed during the development of the system build or release.

4.2 SYSTEM TESTING

The table below summarizes the results of system testing:

Test Case ID	Date Tested	Tester	Pass/Fail	Severity of Defect	Summary of Defect	Closed prior to Production Release?	Comments
						<Yes> or <No>	

[If the test case failed, list the corresponding Test Incident ID in the Comments column.]

4.3 USER ACCEPTANCE TESTING

The table below summarizes the test cases employed for user acceptance testing and the test results obtained for each test case:

Test Case ID	Date Tested	Tester	Pass/Fail	Severity of Defect	Summary of Defect	Closed prior to Production Release?	Comments

						<Yes> or <No>	

[If the test case failed, list the corresponding Test Incident ID in the Comments column.]

4.4 AD HOC TESTING

The table below summarizes the test cases employed for ad hoc testing and the test results obtained for each test case:

Test Case ID	Date Tested	Tester	Pass/Fail	Severity of Defect	Summary of Defect	Closed prior to Production Release?	Comments
						<Yes> or <No>	

[If the test case failed, list the corresponding Test Incident ID in the Comments column.]

4.5 REGRESSION TESTING

The table below summarizes the test cases employed for regression testing and the test results obtained for each test case:

Test Case ID	Date Tested	Tester	Pass/Fail	Severity of Defect	Summary of Defect	Closed prior to Product	Comments

						ion Release?	
						<Yes> or <No>	

[If the test case failed, list the corresponding Test Incident ID in the Comments column.]

4.6 PERFORMANCE TESTING

The table below summarizes the test cases employed for performance testing and the test results obtained for each test case:

Test Case ID	Date Tested	Tester	Pass/Fail	Severity of Defect	Summary of Defect	Closed prior to Production Release?	Comments
						<Yes> or <No>	

[If the test case failed, list the corresponding Test Incident ID in the Comments column.]

4.7 <TYPE OF TEST>

The table below summarizes the test cases employed for <type of test (e.g., interface testing)> and the test results obtained for each test case:

Test Case ID	Date Tested	Tester	Pass/Fail	Severity of Defect	Summary of Defect	Closed prior to Production Release?	Comments
						<Yes> or <No>	

[If the test case failed, list the corresponding Test Incident ID in the Comments column.]

5.0 VARIANCES

[Describe any variances between the testing that was planned and the testing that actually occurred. Also, provide an assessment of the manner in which the test environment may be different from the operational environment and the effect of this difference on the test results.]

6.0 TEST INSTANCES

[Provide a brief description of the unexpected results, problems, or defects that occurred during the testing.]

6.1 RESOLVED TEST INCIDENTS

[Identify all resolved test incidents and summarize their resolutions. Reference may be made to Test Incident Reports that describe in detail the unexpected results, problems, or defects reported during testing, along with their documented resolutions, which may be included as an appendix to this document.]

6.2 UNRESOLVED TEST INCIDENTS

[Identify all unresolved test incidents and provide a plan of action for their resolution. Reference may be made to Test Incident Reports that describe in detail the unexpected results, problems, or defects reported during testing, which may be included as an appendix to this document.]

7.0 RECOMMENDATIONS

[Describe what actions are suggested upon completion of this test. Provide any recommended improvements in the design, operation, or future testing of the business product that resulted from the testing being reported. A discussion of each recommendation and its impact on the business product may be provided. If there are no recommendations to report, then simply state as such.]

APPENDIX A: Test Report Approval

The undersigned acknowledge they have reviewed the Echo Haulers **Test Report** and agree with the approach it presents. Changes to this **Test Report** will be coordinated with and approved by the undersigned or their designated representatives.

Signature:		Date:	
Print Name:			
Title:			
Role:	Project Manager		

APPENDIX B: REFERENCES

[Insert the name, version number, description, and physical location of any documents referenced in this document. Add rows to the table as necessary.]

The following table summarizes the documents referenced in this document.

Document Name and Version	Description	Location
<Document Name and Version Number>	*[Provide description of the document]*	*<URL or location where document is located>*

APPENDIX C: KEY TERMS

[Insert terms and definitions used in this document. Add rows to the table as necessary.]

The following table provides definitions for terms relevant to this document.

Term	Definition
[Insert Term]	*[Provide definition of the term used in this document.]*
[Insert Term]	*[Provide definition of the term used in this document.]*
[Insert Term]	*[Provide definition of the term used in this document.]*

milestone

Completed Milestone Report

This document is to be used during the development stage when each milestone has been achieved. If a project has four milestones there should therefore be four Completed Milestone Reports by the end of the development stage.

The Project Leader should complete a summary report of the progress to date, including projects tolerances and risks, as well as reviewing the project against the original business case. This can be used as the basis of the meeting with the Independent Reviewer (form a committee, or appointed by the Project Manager).

The Independent Reviewer should then complete the second section to recommend whether the project moves on to the next milestone (or if there are no further milestones i.e. the implementation has been completed, then the project should move to evaluation stage).

Project Title:	SmartWaste:Waste Collection Scheduling & Route Optimization System in Tuy, Batangas
Date:	5/4/2026
Project Manager:	
Project Leader:	Gian Paolo Mulingbayan
Independent Reviewer:	
Author:	

Version History

Version Date	Previous Versions Date	Number of Changes

Stage Summary (Review of previous stage)

The Project Manager should report the progress achieved during this stage. This must include any problems or unexpected issues and their impact on the project, any costs incurred or lessons which have been learnt during this stage and has the project remained on schedule?

(Expand box as needed)

Has the project remainder on schedule/on budget/within scope? (If not, please explain and justify)
The Project Manager should report the progress achieved during this stage against schedule, scope and budget.

The Echo Haulers project remained on schedule, within budget, and within scope during the testing stage. Planned tasks were completed on time, project costs stayed within the allocated budget, and all core system features were delivered as outlined in the project plan. Minor refinements were made based on testing feedback, but these did not significantly affect the project timeline, budget, or overall scope.

Project Plan Expectations (Look forward to the next Stage(s))
Indicate if the outlook on the project has now been affected, or if it is still on schedule and what the schedule is.

The outlook for the SmartWaste project remains positive and has not been significantly affected by any major issues. The project is still generally on schedule, with only minor delays that have already been addressed through adjustments in development and testing activities. These delays have not impacted the overall timeline or final delivery date.

The next stage of the project is planned appropriately and focuses on final system development, testing, and refinement based on user feedback. Key tasks include completing remaining system features, conducting integration and user acceptance testing, resolving identified bugs, and improving system performance and usability.

The schedule for the next stage remains aligned with the original project plan, ensuring that all remaining deliverables will be completed within the agreed timeframe. Resources and responsibilities have been clearly assigned to support smooth progression into the next phase.

Business Case Review (Look at the overall project)

Summarise the business case including the reasons for the project, the options, expected benefits, risks, costs and timescales. Is this still going according to plan?

The SmartWaste project was developed to improve waste management by addressing issues in manual reporting, delayed response, and lack of real-time monitoring. It aims to replace inefficient processes with a centralized system that improves accuracy, speed, and coordination.

Several options were considered, including maintaining the current system, making partial improvements, and fully developing a SmartWaste system. The full system was chosen because it offers the most effective long-term solution.

The expected benefits include faster waste reporting, better monitoring, reduced manual work, fewer errors, and improved decision-making through real-time data. However, risks include technical challenges, user resistance, data errors, budget limits, system downtime, and security concerns. Costs involve development, infrastructure, training, maintenance, and upgrades. The project follows planned phases such as analysis, design, development, testing, and deployment.

Risk Review

Have any additional risks been identified, have any anticipated risks at the beginning of the project been met and how were they overcome?

During the SmartWaste project, additional risks were identified such as user resistance during testing, minor system integration delays, and data inconsistencies. Some initial risks also occurred, including technical issues like bugs and performance problems, which were resolved through debugging and repeated testing.

User resistance was managed through training and system orientation, while schedule and budget risks were controlled through close monitoring and phased development. Data security concerns were addressed using basic security measures like access control and validation.

Questions for the Independent Reviewer to Complete

Milestone	**Yes**	**No**	**Comments** *Please add additional rows if required*
Stage Summary			

Has the stage been completed satisfactorily?	☐	☐	The current stage has been completed satisfactorily with all required deliverables produced and reviewed. Minor issues identified during development were resolved.
If not, why not?			
Project Tolerances			The project remains within the approved budget with no significant overspending.
Is the project proceeding within budget?	☐	☐	The project is generally on schedule, with only minor delays that have been managed.
Is the project proceeding within time?	☐	☐	The project is generally on schedule, with only minor delays that have been managed.
Is the project proceeding within quality / scope?	☐	☐	The system is being developed according to the agreed scope and quality standards.
Project Plan Expectations			
Are you satisfied that the next stage has been planned appropriately?	☐	☐	The next stage is properly planned with clear tasks, timeline, and resources identified.
Is the milestone for the next stage appropriate?	☐	☐	The milestone is realistic and aligns with the project schedule and deliverables.
Business Case Review			
Is the project still on track to meet the overall objectives?	☐	☐	The SmartWaste project is still on track to meet its objectives of improving waste

			management efficiency and data handling.
Risk Review			
Have the project risks been identified, updated and plans for their management identified?	☐	☐	Risks have been identified, regularly updated, and managed through mitigation strategies such as testing, training, and monitoring.

Should the project move onto the next milestone/stage?	Yes ☐	No ☐
